Getting Started with Web API

Prerequisites:

1. Your company must sign up for the new Standard License pricing and Terms of Service.
2. PROCAS will enable the Company for access to the API, allowing Security Admins to control API access via the **Accounting and Reports Users** form.
3. On the **Accounting and Reports Users** form, select the **API Users** checkbox next to the applicable user(s) to grant them API access (**Accounting** > **Setup** > **Accounting Security** > **Accounting and Reports Users**).

   NOTE: Data read from the API is pulled from a copy created at 6AM daily. Users who are given access will be able to authenticate with the API after the next copy.

4. You must establish data security rights for each API user. Data security groups, rights and membership, is set up on the following menus within the **Accounting Security** sub-menu
   - **Data Security Groups** – create a group for each unique data security
   - **Data Security Rights** – establish the data each group can access (i.e., specific projects or accounts)
   - **Data Security Membership** – add the API users to their applicable data security groups

API Use:

Power BI Desktop:

We have defined relationships between tables in the API to simplify data modeling and visualization. By default, Power BI Desktop attempts to create relationships between tables after data is loaded. To make best use of the relationships we have defined, turn off this option at File > Options and settings > Options > Current File > Data Load > Autodetect new relationships after data is loaded.

1. Download Power BI Desktop here and launch the application.
2. Select Get Data on the ribbon and choose OData Feed, then click Connect.
3. Type https://data.procas.com/ProcasData/v1/ as the URL.
   - You can find your company code under Setup > Company > Company Information > Code. Enter this code at the end of the URL. (For example: If given the Company Code "SAMPLE", then the URL would be https://data.procas.com/ProcasData/v1/SAMPLE)
4. Click **OK**.
5. On the following window, you will be prompted for Authentication. Select **Basic**.
6. Enter the Username and Password that you use to log into PROCAS.
7. Click **Connect**.
8. Select desired tables and click **Load**.
9. Work with the data as required.
10. The **Home** > **Refresh** button on the ribbon can now be used to download the latest data.

Microsoft Excel:

1. Download Excel here and launch the application.
2. Select **Get Data** on the **Data** tab in the top ribbon.
3. Select **From Other Sources** > **From OData Feed**.
4. Type https://data.procas.com/ProcasData/v1/ as the URL.
    - You can find your company code under Setup > Company > Company Information > Code. Enter this code at the end of the URL. (For example: If given the Company Code "SAMPLE", then the URL would be https://data.procas.com/ProcasData/v1/SAMPLE)
5. Click **OK**.
6. On the following window, you will be prompted for Authentication. Select **Basic**.
7. Enter the Username and Password that you use to log into PROCAS.
8. Click **Connect**.
9. Select desired tables and click **Load**.
10. Work with the data as required.
11. The Query can now be managed in the Queries and Connections pane.
    - To load data into a worksheet, right click on the **Query** in the **Queries and Connections** pane and select **Load To** in the context menu.
12. The **Data** > **Refresh All** button on the ribbon can now be used to download the latest data.

Generic /Other Application:

The PROCAS Web API can be used to pull Accounting and Timekeeping data into a variety of applications.

1. The API can be consumed as a set of related tables by using the URL of the OData Feed.
    - Use https://data.procas.com/ProcasData/v1/ as the URL.
    - You can find your company code under Setup > Company > Company Information > Code. Enter this code at the end of the URL. (For example: If given the Company Code "SAMPLE", then the URL would be https://data.procas.com/ProcasData/v1/SAMPLE)
2. The API can also be consumed as an endpoint to an individual table without the use of OData.
    - Use https://data.procas.com/ProcasData/v1/ as the URL.
    - You can find your company code under Setup > Company > Company Information > Code. Enter this code at the end of the URL.
    - Enter the individual table name at the end of the URL. (Case sensitive) (For example: If given the Company Code "SAMPLE", then the URL would be https://data.procas.com/ProcasData/v1/SAMPLE/Project)
3. In either case, Basic Authentication must be used. Use the Username and Password that you use to log into PROCAS.
